Stora Enso Technical Services

Print productivity

Stora Enso's papers have world-class runnability in all common printing methods. We transfer this knowhow by offering a runnability analysis service for printers. Whether starting up new machines or when encountering new runnability problems, our analysis service will allow you to reach higher operations efficiency.

Recyclability testing

Stora Enso has pioneered deinking methods to further improve the recyclability of printed products. We offer the opportunity to test the recyclability of your printed products.

Printing quality

Stora Enso offers the opportunity to do testing with a full scale sheet-fed offset printing machine. The testing service includes technical advice and trouble shooting help from our experts. The lab service contains dampening water analyses, ink analyses and ink, blanket, plate and paper benchmarking.
